

## WELCOME, COURCREW.

We've converged from seemingly divergent outposts. 70 nations across 6 continents. Among us are fighter pilots, designers, programmers, engineers, journalists, CEOs, emergency physicians, and many more we'll meet. From the crowd, we've forged a crew: the "& Co." part of Redux & Co. More together than alone. We built COURG (pronounced: courage) for your adventures—to equip you with a mission critical time machine. Take courage, and gear-up. You've got missions to tackle. Onward.

## MISSION DEBRIEF: YOUR STORIES

We know you'll have stories to share about your missions with COURG. Keep it concise. Include some high-res images. Post on social @ReduxWatch (Instagram, FB, etc.) #COURGcrew or email crew@reduxwatch.com.

## ONE YEAR WARRANTY

If a manufacturing defect develops within one (1) year period under normal use, we will repair (i.e. a new or overhauled and inspected module will be installed) at our option, with your proof of purchase. Return shipping, service, and handling fees apply. Warranty void if the watch has been opened, damaged by accident, negligence, unauthorized service, or factors not due to defects in manufacturing. Connect with us first to make arrangements and confirm coverage.

## OPERATOR'S MANUAL

Your COURG is powered by the Seiko NH35A automatic movement. This movement features a date complication, but for no-date variants the date wheel is covered by the dial. A screw-down crown improves water resistance and protects the movement. Ensure the crown is secured after adjustment. Push the crown gently towards the case to align threads before screwing down. The crown may be placed in 3 positions:

- A. Unscrewed.** Rotate the crown clockwise to manually wind the movement. We suggest 50 rotations if you have not used the unit in a while. With regular use, the movement holds 41 hours of power reserve.
- B. Partially pulled out.** Advance the date wheel with counter-clockwise rotation (**not on no-date variants**).
- C. Fully pulled out.** Stops time. Rotate the hands to set the time. We recommend you only turn the hands clockwise for the long-term health of the movement. Never adjust between 9pm–3am, date gears in motion.
